Claim Rejections - 35 USC § 112/101

Claim 18 provides for the use in a rotary vane compressor, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 18 is also rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 102/103

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/647,531

Art Unit: 1764

Claims 1-24 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Takigawa et al (6,251,300).

Takigawa et al ["Takigawa"] disclose a refrigerator oil coomposition for use with an HFC refrigerant which comprises (A) 70 to 99% by weight of an alkylbenzene oil containing at least 60% by weight, based on the total weight of component (A), of alkylbenzenes having a molecular weight of 200 to 350, and (B) 30 to 1% by weight of at least one synthetic oil containing oxygen including polyol esters. See column 2, lines 20-60. The alkylbenzene oil has a kinematic viscosity of 3 to 50 mm²/s. See column 5, lines 12-18. The polyol ester may be prepared from the polyalcohols trimethylolpropane and pentaerythritol and a fatty acid having 6 to 20 carbon atoms. See column 6, lines 11-53. Takigawa teaches that the refrigerator oil may comprise only components (A) and (B) without any additives. Alternatively, conventional refrigerant additives including phosphorus compounds may be added to the oil composition. See column 10, lines 3-19. The examiner is of the position that the refrigerant oil composition of Takigawa anticipates the lubricant compositions of the claims. Properties in the dependent claims not taught by Takigawa, such as pour point and acid number of the alkylbenzene component, are seen to be inherent since the alkylbenzene component is the same. Takigawa also teaches that since the refrigerator oil composition is excellent in electrical properties and low in hygroscopy, it may be used in other applications including air conditioners and compressors of a centrifugal type. See column 14, lines 11-25. Independent claim 1 differs by specifying that the lubricant composition is used in a rotary vane compressor. However, the recitation has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally

Art Unit: 1764

not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicants' disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ellen M. McAvoy whose telephone number is (571) 272-1451. The examiner can normally be reached on M-F (7:30-5:00) with alt. Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on (571) 272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
